

CUSTOMER INFORMATION NOTICE and IMPORTANT CONTRACT NOTES: We may customize your program to meet the needs of your lawn. Because turf and environmental conditions vary, lawn improvement may take **2-3 full growing seasons**. Patience is necessary. The health of your lawn is affected by many factors, only some of which can be controlled. Therefore, the success of our program is limited to the extent these factors can be managed. These include but are not limited to weather, soil type, sunlight/shade, exposure, traffic, mowing, slope, acts of nature, pest types, previous care or lack thereof, climate change etc.

*Under ideal conditions, lawns begin to improve after a few applications. To reach full potential, however, may take 2-3 full growing seasons.

*Crabgrass can only be adequately controlled if both applications #1 and #2 are performed. If not, some crabgrass must be tolerated by homeowner.

*Weed controls reduce but **do not eliminate all weeds**. Weeds germinate every day, will be noticed and **must be tolerated between services**. Kyllinga and other sedges are particularly hard to control and will brown out in patches after treatment. To control, this must be tolerated to by the homeowner.

*Partial programs are simply not effective in helping lawns reach their potential. All 6 services are needed each year as they provide consistent nutrition/controls.

*Shade is your lawn's #1 enemy. Most turf grasses need at least **6 hours of direct sunlight daily**. Even shade varieties need 2-3 hours daily.

*Our fertilizers are slow release and **do not burn** lawns when applied in the Summer. Temperatures over 85 degrees, dryness or fungus will cause lawns to brown out and have nothing to do with fertilizer. Lawns should be treated normally while mother nature goes through her normal hot and dry cycles.

*Lawn diseases (fungus) are the norm due to climate change. **Excessive moisture promotes fungus**. Proper watering and cutting are necessary for mitigation.

"Be aware that sanitation, as well as physical and biological control measures, should be considered as a part of a good pest control program. Pesticides may be used as another part of a good pest control program. Pesticides are substances used to control living organisms and vary in degree of toxicity." "A copy of the label(s) for the pesticide(s) used will be available, if requested by the contracting party." The exact pesticide # (1 - 10) and caution code will be provided on your service invoices at the time of service. All codes and cautions can be referenced below:

BRANDNAME	CHEMICALNAME	EPA#	RATE	CODE	WARNINGS	TARGET	APPROX. DATES
1 Lesco Dimension .15	Dithiopyr	10404-86	3.5 lb/k	C	1,2,3,4,5,7	Crabgrass	4/10,4/23,5/6,5/19,6/1

Given normal weather conditions applications take place every 4 to 6 weeks. We will notify you, by e-mail or post card, prior to each application advising you of the exact week that your service will be performed. If the date is infeasible, rescheduling may occur at our discretion. "The property owner or owner's agent may request the specific date or dates of the application(s) to be provided and, if so requested, the pesticide applicator or business must inform of the specific dates and include that date or dates in the contract." "The exact dates of application shall be available if requested". At the time of NY application, at least 2 pesticide notification signs will be placed on the property. These signs must remain in place for a minimum of 72 hours. By accepting this contract, customers agree to be responsible for removing the signs after 72 hours. Our customers knowingly accept this responsibility as part of original and subsequent contract agreements with Lawn-A-Mat. Business address: PO Box 938, Milford, PA. 18337. 570-409-1869.
